evaluation:										
Subject description										
Learning objecti	ves: Prov	ide stud	lents wi	th a compre	ehe	nsive understanding	of lighting s	cience and		
technology inclu	ding basi	c terms	and prin	ciples of ph	oto	metry, light sources,	luminaires a	and lighting		
design. Strengthe	en knowle	edge ab	out LED	s and state-	of-	the-art lighting solut	ions. Devel	op skills in		
collaborating and	l commur	nicating	with lig	hting profes	sio	nals in English.		1		
Topics to be covered:										
			Topics				Week	Lessons		
Basic concents ((2/13)									
Basic concepts i	$\frac{2}{13}$	ight refl	ectance	transmittan	CA	and absorbance				
Light perception	nercentu	al nevel	vology (United illus	ion	Basic radiometric	1.	2		
and photometric	nrinciples	and au	antities	Fundamen	tale	s of lighting design				
Structure and n	bysiolog	s and qu	non ovo	(2/20)	tan	s of fighting design.		-		
Optical and pour	al process	y of null	sion Ac	(2/20)	on	adaptation visual	2	2		
optical and neur	an process	aloro	SIOII. AC	al and biolo	on,	adaptation, visual	2.	2		
Color vision (2/27)						-				
Color vision (2/	101 Tristi	mulue o	olor vici	on			3.	2		
D size and interacting and a high structure main singles and successfitting (2)(2)						-				
Dasic radionieu	Basic radiometric and photometric principles and quantities. (3/6)									
Radiant flux, luminous flux, radiant energy, light energy, radiant intensity, 4.						2				
Basic photometric measurements										
Colorimotry (2/	$\frac{12}{12}$	ements.						-		
Color systems (B	$\frac{13}{CP} \mathbf{V} \mathbf{V}'$	7 Lob		lor tompore		ra (CCT) color				
color systems (R	\mathbf{D} , \mathbf{A} \mathbf{D}	L, Lau, I	Luv). Co	ios Charact	tori	e (CCT), color	5.	2		
sources and surf	$(\mathbf{x}_{1}), \mathbf{c}_{0}(\mathbf{x}_{1})$	untere	lice men	ics. Characi	len					
sources and surface colors.						-				
Electrical light of	ia aischa	rge lign	ont low	es (5/20)	aah	arga high intensity	6	2		
discharge lamps	and solid	state lie	the shift of the second s	pressure un	sen	large, mgn mensity	0.	2		
Light omitting of		-State 112	ginning ut	evices.				-		
Light enitting t	inciples (3/	27) nd toohr	ologias	norrow har		and white phoephor				
LED working pr	LED working principles and technologies: narrow band and white phosphor							2		
circuits and drivers. Operation constrains and failure mechanisms										
Luminaires (4/3	$\frac{18.0}{2}$				nec					
Dringinlag of sha	ning and	controll	ina liaht	Stationary	1	minairaa				
downlights unlight	the louv	red lum	ing ngin ingires (spotlights V	Tur Vəl	lwashers fiber optic				
uowinights, uplights, iouvred luminaires, spotlights. Wallwashers, fiber optic							0.	2		
outdoor luminaries										
Lighting design	<u></u> fundom	entale (4/10)							
Lighting design	i iullualle	Ouantit	+/10) ative liei	hting decigr	ιT	uminance based				
Lighting design Concepts. Quantitative lighting design. Luminance Dased										
Energy efficiency in buildings and in outdoor lighting. Lighting upgrades							2			
Lighting project planning and development. Dequirements of good lighting.						4				
luminance distril	luminance distribution illuminance glare direction of light (shadows) color									
uniformity flick	uniformity, flicker.									
Holiday $(4/17)$						2				
110110ay (4/17)							10.	<u> </u>		

Lighting applications and controls (4/24) Indoor and outdoor lighting. Principles of lighting controls. Chronological time control. Occupancy control. Daylight harvesting. Sensors. Analog and digital control. Wireless lighting control. Adaptive lighting. Lighting in smart cities.		2
Public holiday (5/1)	12.	2
Test (5/8).	13.	2
Course closure (5/15)	14.	2

Assessment and evaluation

<u>Requirements of the signature</u>: Regular class attendance is a prerequisite for receiving credit in the course. Course attendance is tracked and maximum 2 absences are allowed. Students whose absences exceed 2 will be dropped from the course.

Students will take a test on week 13. The maximum test score is 50. The minimum test score to pass the test is 25. Students can retake the test in case they do not reach the minimum requirements. Final correction opportunity is within the first 10 days of the examination period. (Aláíráspótló vizsga)

Students will also submit 10 coursewares (weeks 1-7, 9-11) which may take a form of a lighting calculation, short essay or literature search in English. Students can get maximum 5 scores for each homework. The total score for the courseware is 50, so the highest score a student can earn during the course is 100.

Type of exam: semester mark

<u>Evaluation of the semester mark</u>: Semester mark is derived from the total score which is the sum of the test score and the courseware score:

Mark	Total score					
5	85-100 %					
4	74-84 %					
3	63-73 %					
2	50-62 %					
1	0-49 %					
Suggested material
