

## Assessment and subject description

<b>Óbuda University</b>		Kandó Kálmán Faculty of Electrical Engineering		Institute of Microelectronics and Technology	
<i>Subject name and code:</i> <b>Digital Technics II. laboratory, KEXDT3ABNE</b>				<b>Credits: 2</b>	
<b>Full-time, Fall Semester</b>					
Course: BSc in Electrical Engineering					
Responsible:	<b>Dr. Kopják József, PhD</b>		Teaching staff:	<b>Dr. Balázs Kovács, PhD</b>	
Prerequisites:		<b>Digital Technics II., KEXDT2ABNE</b>			
Contact hours per week:	Lecture: <b>0</b>	Class discussion: <b>0</b>	Lab hours: <b>2</b>	Tutorial: <b>0</b>	
Assessment and evaluation:	<b>assignment</b>				
<b>Subject description</b>					
<i>Aims:</i> This course will give an overview of the basic concepts and applications of digital technics, from Boolean algebra to FPGAs. The aim is to acquaint the future electrical engineers with the fundamentals of digital technics, with the digital circuits, and with their characteristics and applications.					
<i>Topics to be covered:</i> Fundamentals of digital technics. Logic (Boolean) algebra, logic operations and functions. Combinational logic, analysis and synthesis and implementation of logic circuits. Binary arithmetic, algorithms and circuits. Code systems, code conversion. Multiplexers, demultiplexers, comparators, arithmetic elements, half-adder, full adder. Flip-flops, registers, counters. FPGA basics, architecture, examples.					
<b>Topics</b>			<b>Week</b>	<b>Lessons</b>	
Laboratory Rules and Regulations. Review of Boole algebra and of logic functions.			<b>1.-2.</b>	<b>4</b>	
Combinational logic design. XOR logic. Karnaugh map and applications. The concept and relevance of hazards in logic circuits. FPGA basics.			<b>3.-4.</b>	<b>4</b>	
Digital logic functional building blocks I. Encoders and decoders. Simple code changing combinational circuits. Binary/BCD and BCD/binary decoders. Gray code, binary/Gray conversion, decoders. Encoding: error detection and correction, parity bit. FPGA design			<b>5.-6.</b>	<b>4</b>	
Digital logic functional building blocks II. Multiplexers, demultiplexers, comparators, arithmetic elements, half-adder, full adder. FPGA design			<b>7.-8.</b>	<b>4</b>	
Sequential circuits. Flip-flops. Registers. Shift registers. FPGA design <sup>[1]</sup> <sub>SEP</sub>			<b>9.-10.</b>	<b>4</b>	
Analysis and synthesis of sequential circuits. Counters. Binary counters, decimal counters, Mod-N counters, Gray-code counters. FPGA design			<b>11.-12.</b>	<b>4</b>	
3-bit model arithmetic logic unit (ALU) with FPGA.			<b>13.-14.</b>	<b>4</b>	
<b>Assessment and evaluation</b>					
The attendance of the laboratory is obligatory. The coursework comprises several home assignments. Supplement: According to the Rules and Regulations of the University of Óbuda					
<b>Evaluation</b>					
The threshold for pass mark (including the results of home assignments) is 50 %.
